Delta Restaurant, awarded with two Stars MICHELIN Guide Athens 2022 and one MICHELIN Green Star for Sustainable Gastronomy, represents the Greek haute cuisine and adopts a pioneering sustainability framework, following a “nothing lost-nothing wasted” principle.

SNFCC Store
Conclude your visit at the SNFCC Store, and get your SNFCC souvenirs, like the collectible soaps produced from Mediterranean Garden raw materials.
01 Lighthouse

At this moment, you stand at the Lighthouse Terrace, just under the Energy Canopy! The canopy is covered with 5,700 solar panels, and the energy generated on the roof is transferred to the buildings via the Spiral, or the Umbilical Cord, giving life and energy to the rest of the organism! A 100% of the electricity consumed by the SNFCC comes from renewable energy sources. Almost 24% of electricity needs is covered by the solar panels, while the remaining 76% is covered by renewable energy (wind) from our provider.

02 Green Roofs

Walk down and discover the green roofs at the top of the buildings, covered with Mediterranean xeriscape plants that grow in special infrastructure, and have low water needs. Return every season and witness the amazing shifts in colors, aromas and textures!

03 Southern Walks

At this point you stand at the Southern Walks, or right above the SNFCC Parking Lot. Enjoy your walk in one of the secret SNFCC spots and make sure you witness the breathtaking view during sunset.

04 Vegetable Garden

Continue your walk and find the Vegetable Garden, created as a point of the Stavros Niarchos Park used both for urban cultivation of organic vegetables and for the education of children and adults, with gardening workshops.

05 Great Lawn

You are now at the Great Lawn, the point where all of the Park’s paths cross! One “green lung” inside the city that awaits for games, a relaxing picnic under the trees, and many events all year long. Turn your gaze back and look up, “stretched up” the sky, towards the magnificent Energy Canopy.

06 Stavros Niarchos Park & Mediterranean Garden

Discover the biggest public Mediterranean garden in the world, occupying 85% of the SNFCC’s total area, a living organism with constant evolution. Here, you will meet about 16 tree species, 161 shrub species and a variety of grasses and bulbs. The SNFCC has doubled the green surface per capita in the local community, while significantly affecting the microclimate of the wider region.

07 Canal

The Canal is one of the most characteristic elements of the SNFCC, as it redefines the relationship of the area with the sea and acts as a flood control structure. It is fed with water from the sea, which is returned to the sea, in a continuous flow, after being filtered. The strict environmental specifications of the SNFCC and its LEED platinum certification prohibit cleaning the Canal water with chlorine, or other chemical agents.

Sustainability

Discover the SNFCC as a sustainability hub!

The SNFCC as a Green Building is the first large-scale cultural project to achieve LEED Platinum certification in Europe, as a building designed and structured following rigorous principles of sustainable construction and environmentally innovative practices, that focus on water and energy efficiency, reduction of CO2 emissions, and the rational management of resources.
